## Risk and Reward Profile

The risk and reward indicator illustrates where the Fund is positioned in terms of its possible risks relative to its potential rewards. The higher the Fund's position on this scale, the greater the possible reward, but also the greater risk of losing money. This risk indicator is calculated using historical data, which cannot be used as a prediction for the future. Therefore the risk classification may change over time. Even if the Fund

is in the lowest risk class you can lose money, as no investments are entirely risk free.

The Fund is subject to a high level of risk being linked to typical risks of securities markets, such as the macro-economic trends at global level, the level of inflation and interest rates, the evolution of corporate income, the issuers' stability and currency fluctuations. At this time, the level of the risk and reward profile is equal to 5.

### Are there any other particular Risks?

**Derivative risk** - the Fund may use derivatives as described in the above section - Investment Policy. Use of derivatives results in higher chances of loss due to the use of leverage, or borrowing. Derivatives allow investors to earn large returns from small movements in the

underlying asset's price. However, investors could lose large amounts if the price of the underlying moves against them significantly.

**Operational risk** - due to issues such as natural disasters, technical problems and fraud.

**Sustainability risk** - in the context of the Fund is an ESG event or condition that, if it occurs, could cause an actual or a potential material negative impact on the value of the investment.
